

MOSAIC

Content Vault

Secure, Simplified Media Storage

Key Features

- Secure, cost-effective media management and storage solution
- Simple access, management, search and browse
- 24x7 hosting, service and support
- Optional forwarding to a different site via Mosaic Content Flow
- Optional transcoding via Mosaic Content Transform

Key Benefits

- Rapidly and easily deploy and manage
- Leverage a service that grows with your business
- Expand at your pace – add functions and modules to reach a full transformational capability over time
- Reduce risk of content loss, damage to physical assets and exposure to utility prices
- Benefit from improved cycle times and security over in-house solutions
- Make the shift from a CAPEX model to an OPEX one, with costs that are predictable and align directly with revenue

Storage and management of high volumes of digital media is a critical requirement for many organizations. In addition to the CAPEX and time investment incurred, in-house storage solutions often face an inability to scale with a company's business – whether from an infrastructure perspective, or due to the sophisticated needs of effective media asset management and metadata capture.

What is Mosaic Content Vault?

Mosaic Content Vault is a secure, scalable cloud-based media asset management and storage platform. From a standard web-browser, customers can upload media files to Content Vault using our accelerated network transfer capabilities. Inside Content Vault, media objects are stored under a logical, straightforward user interface along with associated descriptive and technical metadata. Powerful search and browse capabilities enable easy management of media along with the ability to view thumbnails and a media preview player. Accessing media is just as simple with automated tools to transfer selected assets back to the browser.

Storage Across the Content Spectrum

Whether you are a large broadcaster who is looking for a no-CAPEX solution, a production or post-production company, or an organization dedicated to aggregating and distributing content across digital media platforms, Mosaic Content Vault is designed for customers across the media value chain. Service providers, with content customers, can also benefit from the lower total cost of service delivery that Mosaic Content Vault can provide.

A Future-proof Solution

Mosaic Content Vault is designed to evolve with your business. As a module within the Mosaic cloud-based media asset and workflow management service, the service can be upgraded to an full suite of enterprise capabilities including shot-logging, view and approve, edit suite integration, transcoding and media workflow management.

The Tata Communications' Difference

Mosaic Content Vault is supported by Tata Communications' world-class Global Media Delivery Infrastructure. We leverage over 200,000 km of subsea and terrestrial fiber backbone to deliver low-latency and high-redundancy to the world's global media hotspots, ensuring high levels of capacity and control for unparalleled, video-optimized performance. Because we own the network and data centers, we can provide 24x7 end-to-end dedicated service and we support customers' profiles with full professional encoding options versus a restricted list.
